<b>Activity</b>		<p><b><u>Weston/START OBR 1 Team Activity:</u></b></p> <p>Enbridge performed a 2" scrape on impacted soils in the northern OB 10.37 RDB polygon today. A total of 350 square feet of impacted soils were removed today. The soil on the southeastern edge of the polygon was heavily impacted down to groundwater (approximately 6" bgs). The soil in the southwestern edge of the northern polygon was also heavily impacted down to groundwater (approximately 4"-6" bgs). Absorbent pads were placed in both impacted areas to recover oil globules observed on the groundwater surface</p> <p>Following the scrape of the impacted area a visual inspection of the scraped location was performed by EPA START and MDEQ, upon verification that all impacted soils were removed post scrape soil samples were collected by AECOM and MDEQ. The scraped location was then backfilled with clean clay loam soil and restoration work was performed by JFNew.</p> <p>All scraping activities were completed on the northern polygon today, making all scraping activities complete at OB 10.37 RDB.</p>
